

Three Design Alternatives

Design #1 – Creating a room for meetings

Changing room structure to create a meeting room so that people can talk with the patients face to face with a glass in between

Can be used for counseling or visits from outside

Design #2 – A doll that speaks sympathetic to the patient's situation

A device that records the patients' speech and stores the recorded content on the counselor's PC. Then the counselor listens to the recording stored in the PC and gives sympathy and comfort to the patient through the doll

Design #3 – Use of video phones

Implementing the use of video phones to have a way for the patient and the medical staff to have a two-way conversation freely whenever they want
